

BHF CVD STATISTICS COMPENDIUM 2017 -

CONTENTS & GLOSSARY

This compendium of CVD statistics has been produced in collaboration with the British Heart Foundation Centre on Population Approaches for Non-Communicable Disease Prevention at the Nuffield Department of Population Health, University of Oxford.

First published March 2017. Updates will follow at regular intervals throughout the year.

There are four chapters presented here (mortality, morbidity, treatment and costs) with a fifth chapter devoted to risk factors to follow.

Original Excel spreadsheets, graphs and tables can be found on our website at bhf.org.uk/statistics

BHF CVD Factsheets are available for the UK, Scotland, Wales and Northern Ireland.
For any queries, please [contact us](#) and we will do our best to help.

CHAPTER 1 - MORTALITY

MORTALITY BY CAUSE

Table 1.1	Figure 1.1a/b	Deaths by cause, by gender and age, United Kingdom 2015
Table 1.2	Figure 1.2a/b	Deaths by cause, all ages by gender, England, Wales, Scotland and Northern Ireland 2015

TRENDS IN MORTALITY

Table 1.3	Figure 1.3	Age-standardised death rates from cardiovascular disease (CVD), all ages, England, Wales, Scotland, Northern Ireland and United Kingdom 1969 to 2015
Table 1.4	Figure 1.4	Age-standardised death rates from cardiovascular disease (CVD), under 75, England, Wales, Scotland, Northern Ireland and United Kingdom 1969 to 2015
Table 1.5	Figure 1.5	Age-standardised death rates from coronary heart disease (CHD), all ages, England, Wales, Scotland, Northern Ireland and United Kingdom 1971 to 2015
Table 1.6	Figure 1.6	Age-standardised death rates from coronary heart disease (CHD), under 75, England, Wales, Scotland, Northern Ireland and United Kingdom 1969 to 2015
Table 1.7	Figure 1.7	Age-standardised death rates from stroke, all ages, England, Wales, Scotland, Northern Ireland and United Kingdom 1969 to 2015
Table 1.8	Figure 1.8	Age-standardised death rates from stroke, under 75, England, Wales, Scotland, Northern Ireland and United Kingdom 1969 to 2015

EXCESS WINTER MORTALITY

Table 1.9	Excess winter mortality for CVD and CHD by gender and age, England 2010/2011 to 2013/14
Table 1.10	Excess winter mortality for CVD and CHD by gender and age, Wales 2010/2011 to 2013/14
Table 1.11	Excess winter mortality for CVD and CHD by gender and age, Northern Ireland 2010/2011 to 2014/15
Table 1.12	Excess winter mortality for CVD, England and Wales, 2007/08-2015/16

MORTALITY BY NATION AND REGION

Table 1.13	Numbers of deaths and age-standardised death rates from cardiovascular disease (CVD) in men and women, all ages by region and nation, United Kingdom 2013/15
Table 1.14	Numbers of deaths and age-standardised death rates from cardiovascular disease (CVD) in men and women, under 75, by region and nation, United Kingdom 2013/15
Table 1.15	Numbers of deaths and age-standardised death rates from coronary heart disease (CHD) in men and women, all ages, by region and nation, United Kingdom 2013/15
Table 1.16	Numbers of deaths and age-standardised death rates from coronary heart disease (CHD) in men and women, under 75, by region and nation, United Kingdom 2013/15
Table 1.17	Numbers of deaths and age-standardised death rates from stroke in men and women, all ages, by region and nation, United Kingdom 2013/15
Table 1.18	Numbers of deaths and age-standardised death rates from stroke in men and women, under 75, by region and nation, United Kingdom 2013/15

MORTALITY BY LOCAL AUTHORITY

Table 1.19	Figure 1.19	Cardiovascular disease (CVD) mortality rates, all ages by local authority, United Kingdom 2013/15; maps by gender and combined
Table 1.20	Figure 1.20	Cardiovascular disease (CVD) mortality rates, under 75 by local authority, United Kingdom 2013/15; maps by gender and combined
Table 1.21	Figure 1.21	Coronary heart disease (CHD) mortality rates by local authority, United Kingdom 2013/15; maps by gender and combined
Table 1.22	Figure 1.22	Coronary heart disease (CHD) mortality rates, under 75 by local authority, United Kingdom 2013/15; maps by gender and combined
Table 1.23	Figure 1.23	Stroke mortality rates, all ages by local authority, United Kingdom 2013/15; maps by gender and combined
Table 1.24	Figure 1.24	Stroke mortality rates, under 75 by local authority, United Kingdom 2013/15; maps by gender and combined

CHAPTER 2 - MORBIDITY

INCIDENCE

Table 2.1	Inpatient episodes by main diagnosis in NHS hospitals, by gender, England, Scotland, Wales, Northern Ireland and United Kingdom latest
Figure 2.1a-b	Inpatient episodes by main diagnosis in NHS hospitals, by gender, United Kingdom latest
Figure 2.1c-d	Inpatient episodes by main diagnosis in NHS hospitals, by gender, England 2015/16
Figure 2.1e-f	Inpatient episodes by main diagnosis in NHS hospitals, by gender, Scotland 2014/15
Figure 2.1g-h	Inpatient episodes by main diagnosis in NHS hospitals, by gender, Wales 2015/16
Figure 2.1i-j	Inpatient episodes by main diagnosis in NHS hospitals, by gender, Northern Ireland 2015/16

TRENDS IN INCIDENCE

Tables 2.2a	Inpatient episodes by main diagnosis for men, England, Scotland, Wales, Northern Ireland and United Kingdom 2005/06 - latest
Tables 2.2b	Inpatient episodes by main diagnosis for women, England, Scotland, Wales, Northern Ireland and United Kingdom 2005/06 - latest
Tables 2.2c	All inpatient episodes by main diagnosis, England, Scotland, Wales, Northern Ireland and United Kingdom 2005/06 - latest
Figure 2.2d	All inpatient episodes by main diagnosis, England 2005/06 - 2015/16
Figure 2.2e	All inpatient episodes by main diagnosis, Scotland 2009/10 - 2014/15
Figure 2.2f	All inpatient episodes by main diagnosis, Wales 2005/06 - 2015/16
Figure 2.2g	All inpatient episodes by main diagnosis, Northern Ireland 2010/11 - 2015/16

PREVALENCE

Table 2.3	Prevalence of selected cardiovascular conditions by nation and region, United Kingdom 2015/16
-----------	---

TRENDS IN PREVALENCE

GLOSSARY

This section provides a definition for some of the terms used in our statistics compendium

Age-standardised rate – a measure of the rate that a population would experience if it had a standard age structure. It is useful to present rates as age-standardised, as it allows for comparisons between populations with very different age structures.

Angioplasty – a technique to widen a narrowed or obstructed blood vessel by inflating tightly folded balloons that have been passed into the narrowed location via a catheter. This technique squashes the fatty tissue that has caused the narrowing, hence widening the artery.

Atherosclerosis – a disease characterised by chronic inflammation in the artery walls. The disease is commonly referred to as ‘hardening’ or ‘furring’ of the arteries.

Atrial fibrillation – a heart condition that causes an irregular and often abnormally fast heart rate.

Blood pressure – the physical pressure of blood in the blood vessels. It is similar to the concept of air pressure in a car tyre. These values are quoted in units known as millimetres of mercury (mmHg). See systolic pressure and diastolic pressure.

Body mass index (BMI) – a formula relating body weight to height to assess whether a person is overweight. BMI is calculated by dividing a person’s weight (in kilograms) by their height (in metres) squared. Adults with a BMI of 25-30 are considered to be overweight. Those with a BMI of over 30 are considered obese.

British National Formulary (BNF) – a publication that provides key information on the selection, prescribing, dispensing and administration of all medicines that are generally prescribed in the UK.

Cardiovascular disease (CVD) – the collective term for all diseases affecting the heart and blood vessels.

Cerebrovascular disease – the collective term

for all diseases affecting blood vessels that supply the brain. Technically, stroke (and the many subtypes of stroke) is a subset of cerebrovascular disease, but the two terms are often used interchangeably.

Coronary artery bypass graft (CABG) – an operation to bypass a narrowed section of a coronary artery and improve the blood supply to the heart muscle.

Coronary heart disease (CHD) – the collective term for diseases that occur when the walls of the coronary arteries become narrowed by a gradual build-up of fatty material called atheroma. The two main forms of CHD are heart attack (also known as myocardial infarction) and angina.

Diabetes – a disease caused by a lack of insulin (type 1) or an increased resistance of the body to insulin (type 2). Diabetes is characterised by high blood glucose levels. The resulting chronic high blood glucose levels (hyperglycaemia) are associated with long-term damage, dysfunction and failure of various organs, especially the eyes, kidneys, nerves, heart and blood vessels.

European Standard Population (ESP) – an artificial population structure, which is used in the weighting of mortality or incidence data to produce age-standardised rates. The ESP was updated in 2013 to better reflect the age distribution of Europe.

Heart attack – a condition where the heart muscle is starved of oxygen, most commonly caused by a blockage of one of the coronary arteries. A heart attack usually causes severe pain in the centre of the chest. The pain usually feels like a heaviness or tightness which may also spread to the arms, neck, jaw, face, back or stomach. There may also be sweating, light-headedness, nausea and/or shortness of breath. Sometimes a heart attack can be ‘silent’ and produce little or no discomfort.

Heart failure – a clinical syndrome which occurs when the heart muscle is unable to pump blood as efficiently around the body. It occurs because the heart is damaged or overworked. Some people with minor heart failure may have few or no symptoms. People with moderate or severe heart failure often suffer from a number of problems, including

shortness of breath, general tiredness and swelling of the feet and ankles.

Hospital inpatient episodes – periods of continuous admitted patient care under the same consultant.

Hypertension – a clinical condition of having a high blood pressure. Mostly it is considered blood pressures of 140/90 mmHg and greater to be high although this is influenced by other factors.

Incidence – a measure of morbidity based on the number of new episodes of an illness arising in a population over a defined time period.

International Classification of Disease (ICD) – a coding system published by the World Health Organization that provides an internationally recognised method of coding diseases in order to categorise mortality and morbidity statistics.

Myocardial infarction (MI) – see heart attack.

Percutaneous coronary intervention (PCI) – a minimally invasive approach to open narrowed coronary arteries (see angioplasty) by accessing them through small needle-size

punctures in the skin.

Peripheral arterial disease (PAD) – a condition in which a build-up of fatty deposits in the arteries restricts blood supply to parts of the body, most commonly the legs. It is also known as peripheral vascular disease (PWD).

Prevalence – a measure of morbidity based on the current level of a disease in the population at any particular time.

Stent – a short tube of expandable mesh which is inserted at the part of the artery that is to be widened by coronary angioplasty. It helps to keep the artery open and prevent re-narrowing.

Stroke – the consequence of an interruption to the flow of blood to the brain. A stroke can vary in severity from a passing weakness or tingling of a limb to a profound paralysis, coma and/or death.

Transient ischaemic attacks (TIA) – a temporary disruption in the blood supply to part of the brain. Sometimes called a mini-stroke, a TIA does not last as long as a stroke. The effects are usually fully resolved within 24 hours.

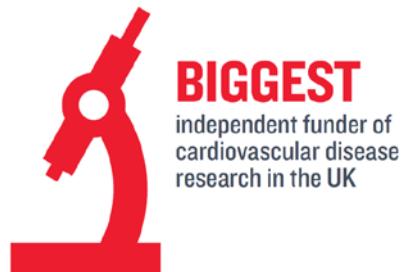

About the British Heart Foundation (BHF)

For over 50 years we've pioneered research that has transformed the lives of millions of people living with heart disease. Our work has been central to the discoveries of vital treatments that are leading the fight against heart disease.

But heart and circulatory disease still kills more than one in four people in the UK, stealing them away from their families and loved ones. From babies born with life-threatening heart problems, to the many mums, dads and grandparents who survive a heart attack or endure their daily battles with heart failure.

Join our fight for every heartbeat in the UK. Every pound raised, minute of your time and donation to our shops will help make a difference to people's lives.

Notes: ICD-10 codes in parentheses.

*Not classified elsewhere

This table compiles data from the four countries of the UK. In Northern Ireland and Scotland, the data for Lung Cancer only includes ICD-10 code C34.

England and Wales data for lower respiratory disease do not include J47.

Notes: ICD-10 codes in parentheses.

*Not classified elsewhere

This table compiles data from the four countries of the UK.

The four countries in this table do not always add up to the United Kingdom totals in Table 1.1, as the separate England and Wales figures are only for people who were residing in the country at the time of death; therefore the mortality figures for England and Wales separately are lower than the published mortality figures for England & Wales together.

Notes: Excess winter mortality calculation: winter deaths-average non-winter deaths.

Excess winter mortality index calculation: (excess winter mortality / average non-winter deaths)*100

The figures for individual age-groups may not sum up to the 'all ages' total due to rounding of figures.

Notes: Excess winter mortality calculation: winter deaths-average non-winter deaths.

Excess winter mortality index calculation: (excess winter mortality / average non-winter deaths)*100

Low numbers of CVD deaths of each age-group in the winter months for Wales may mean that there are large percentage variations

in EWM between each year, which could be due to natural fluctuations rather than meaningful increases or decreases between each year.

The figures for individual age-groups may not sum up to the 'all ages' total due to rounding of figures.

The EWM index cannot be calculated where the number of EWD's is equal to zero or where there are a negative number of excess winter deaths.

Cardiovascular Disease Statistics 2017 - Chapter 2 - Morbidity

This chapter reports on the morbidity of a number of cardiovascular conditions, including coronary heart disease (CHD), myocardial infarction (heart attack), heart failure, and stroke.

Drawing on data from hospital episode statistics, GP registers and national health surveys, we present current estimates as well as trend data for incidence and prevalence of these conditions.

Collecting accurate data is a challenge since the presence and onset of disease is not absolute. Individuals may not be aware that they have a disease or be able to accurately report its onset.

Moreover, some diseases might be misdiagnosed by health professionals. As a result, the estimates of morbidity presented in this chapter should be interpreted with some caution.

INCIDENCE

Notes:

Finished consultant episodes (FCE); ordinary admissions and day cases combined. Pregnancy cases not included. ICD-10 codes in parentheses.

Differences between countries in the categorisation of episodes: in both England and Scotland, an FCE ends when the consultant changes.

However, in Scotland a change of sub-specialty results in a new FCE, whereas in England it does not, e.g. if a patient goes from a cardiac ward to an ITU and is still under the care of the same consultant, in England this would be counted as 1 FCE and in Scotland it would be counted as 2 FCE.

Notes:

Finished consultant episodes; ordinary admissions and day cases combined. Pregnancy cases not included. ICD-10 codes in parentheses.

For England, data for females up to and including 2011/12 is calculated as the difference between total finished consultant episodes and male consultant episodes.

Cardiovascular Disease Statistics 2017 - Chapter 3 - Treatment

This chapter reports on different methods of treatment for cardiovascular disease (CVD), with a focus on treatments for coronary heart disease (CHD). It includes tables and figures for trends and latest statistics on the number of prescriptions, operations and cardiac arrest survival in the UK.

PRESCRIPTIONS

Table 3.1	Figure 3.1	Prescriptions used in the prevention and treatment of cardiovascular disease, England 1981 to 2015
Table 3.2	Figure 3.2	Prescriptions used in the prevention and treatment of cardiovascular disease, Wales 2005 to 2015
Table 3.3	Figure 3.3	Prescriptions used in the prevention and treatment of cardiovascular disease, Scotland 2001/02 to 2015/16
Table 3.4	Figure 3.4	Prescriptions used in the prevention and treatment of cardiovascular disease, Northern Ireland 2000 to 2015
Table 3.5		Prescriptions used in the prevention and treatment of cardiovascular disease, United Kingdom latest available year

OPERATIONS

Table 3.6	Figure 3.6	Number of CABGs and PCIs, United Kingdom 1977 to 2014
Table 3.7		Number of valve replacements and repairs, United Kingdom 2003 to 2013

TRANSPLANTS

Table 3.8	Cardiothoracic transplant list, United Kingdom 2015/16
Table 3.9	Cardiothoracic transplants and rate per million population, by country, United Kingdom 2010/11 to 2015/16

OUT-OF-HOSPITAL CARDIAC ARRESTS

Table 3.10	Out-of-hospital cardiac arrest survival rates, England 2011-12 to 2015-16
----------------------------	---

All prescriptions for disease of the circulatory system	46,252	55,520	70,022	91,037	145,131	234,793	250,855	266,130	277,244	285,530	292,370	300,647	307,424	313,342	316,520

Notes: The data up to 1990 are not consistent with data from 1991 onwards. Figures up to 1990 are based on fees and on a sample of 1 in 200 prescriptions dispensed by community pharmacists and appliance contractors only. Figures from 1991 are based on items and cover all prescriptions dispensed by community pharmacists, appliance contractors, dispensing doctors and prescriptions submitted by prescribing doctors for items personally administered. British National Formulary (BNF) codes in parentheses.

ECONOMIC COSTS

Section 4.7	Economic costs of CVD, United Kingdom 2015
-----------------------------	--

Table 4.1 NHS expenditure on cardiovascular disease by care setting and condition, England 2013/14

	Expenditure (£ million)							
	Primary Prescribing	Unscheduled care	Scheduled care	Unbundled care	Total secondary care	Community & end of life care	Running costs	Total costs
Coronary heart disease	346.1	314.9	186.5	32.4	218.8	51.8	22.2	953.7
Stroke	21.0	399.5	47.8	40.6	88.4	165.8	15.1	689.9
Rhythm	11.3	176.1	118.8	12.0	130.8	14.2	7.8	340.2
Other CVD	588.6	841.5	583.7	110.8	694.5	132.0	51.1	2,307.7
Total CVD	967.0	1,732.0	936.8	195.7	1,132.5	363.8	96.3	4,291.5

Notes:

Expenditure data included within this workbook are taken from the 2013-14 CCG programme budgeting returns. Programme budgeting returns represent a subset of overall NHS expenditure data.

Calculating programme budgeting data is complex and not all healthcare activity or services can be classified directly to a programme budgeting category or care setting.

When it is not possible to reasonably estimate a programme budgeting category, expenditure is classified as 'Other'.

The allocation of expenditure to programme budgeting subcategories is not always straightforward, and subcategory level data should therefore be used with caution.

Estimates of expenditure are calculated using price paid for specific activities and services purchased from healthcare providers.

CCGs follow standard guidance, procedures and mappings when calculating programme budgeting data.

Unscheduled Care: Non-elective admissions (PBR), Unscheduled Care: A&E, Unscheduled Care: Emergency Transport and Unscheduled Care: Other Urgent Care

Scheduled Care: Daycase and elective (PBR) and Scheduled Care Outpatient - (PBR & Non-PBR)

Unbundled care includes, Unbundled Diagnostic Imaging, Unbundled/high cost: Critical Care, Unbundled/high cost: Drugs & devices, Unbundled/high cost: Other and Direct Access Diagnostic Imaging

Total secondary care includes, all Scheduled and Unbundled care.

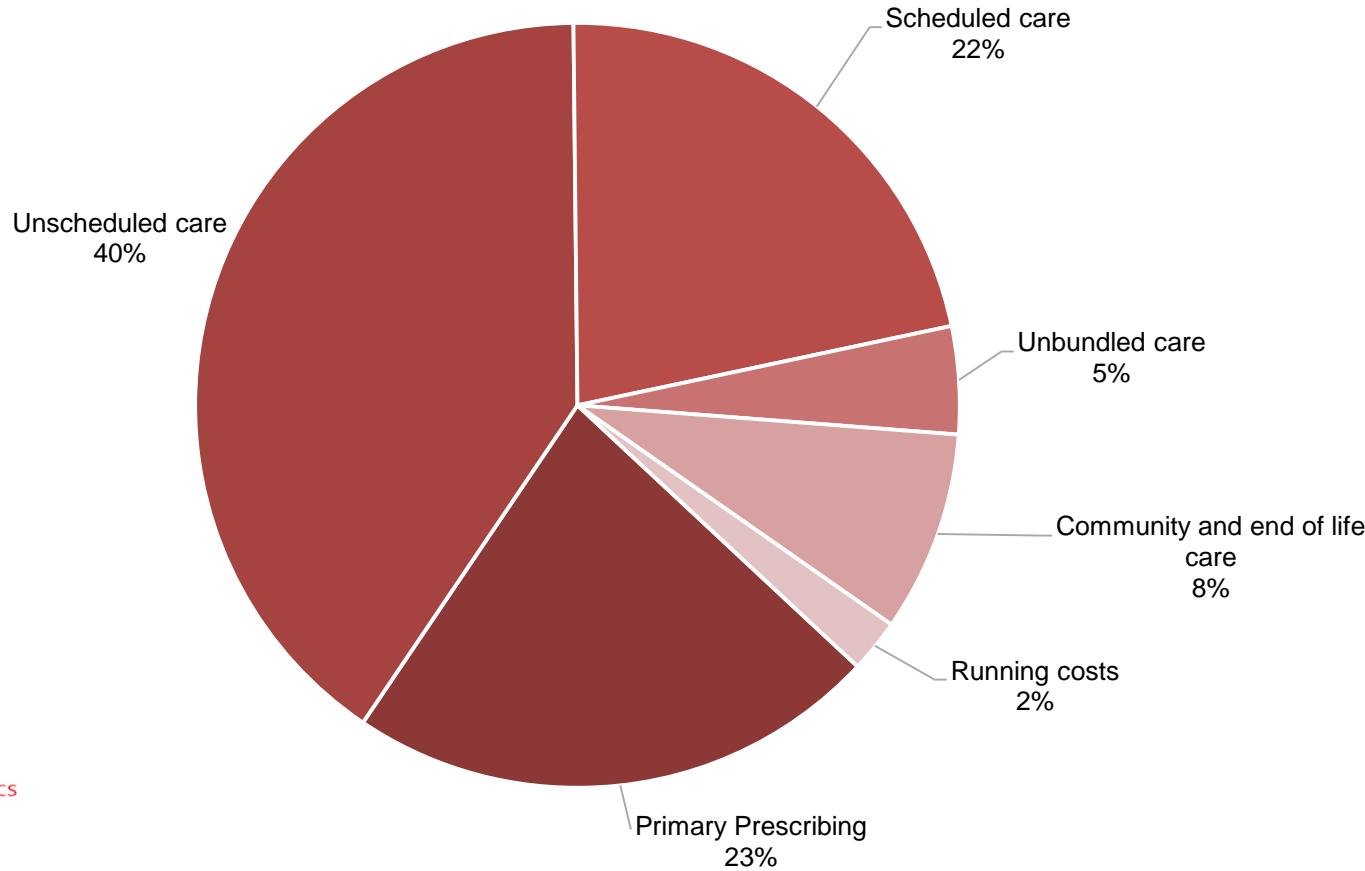

Community and end of life care includes, Community and integrated care and End of Life Care

Table 4.4 NHS expenditure on CVD by Health Board, Wales 2014/15

HSC Trust Name	Expenditure per head / £					Total expenditure (£ millions)				
	CHD	Stroke	Rhythm	Other CVD	Total CVD	CHD	Stroke	Rhythm	Other CVD	Total CVD
Abertawe Bro Morgannwg UHB	36.5	29.9	9.2	68.6	144.1	19.1	15.6	4.8	35.9	75.4
Aneurin Bevan LHB	36.6	19.4	10.9	72.6	139.6	21.3	11.3	6.3	42.1	81
Betsi Cadwaladr UHB	40.5	30.4	10.0	76.3	157.2	28.1	21.1	6.9	53	109.1
Cardiff & Vale UHB	28.7	21.0	7.7	49.7	107.1	13.8	10.1	3.7	24	51.6
Cwm Taf LHB	40.8	30.1	14.0	67.5	152.4	12	8.9	4.2	20	45.1
Hywel Dda LHB	38.2	26.4	13.5	71.2	149.2	14.7	10.1	5.2	27.3	57.3
Powys Teaching LHB	42.0	50.4	10.1	93.9	196.3	5.6	6.7	1.3	12.5	26.1
Wales	37.1	27.1	10.5	69.4	144.1	114.6	83.8	32.4	214.8	445.6

Notes:

Approx. 14% of LHB costs in Wales (including the GMS contract in full) are NOT allocated to programme due to a lack of relevant activity information. Thus, figures shown could be significantly below the full LHB spend on CVD.

The 'Other CVD' programme may include costs which actually relate to CHD, Stroke, and Rhythm where information available identifies spend as related to CVD generally but is not sufficiently detailed to allocate to sub-programme.

Programme costs may include an element of cost apportioned to CVD, rather than allocated by detailed activity information.

Some services are commissioned on a 'host' authority basis and have not been recharged to HB area.

Programme budget categories are defined by reference to ICD 10 codes.

To calculate expenditure per head of population, the ONS revised mid-year population 2015 estimates were used.

Source: Financial Information Strategy, Public Health Wales (2016) Personal communication.

Table 4.5 NHS expenditure on CVD by Health and Social Care Trust, Northern Ireland 2014/15

HSCT Name	Expenditure per head of population /£				CVD expenditure (£ million)			
	CHD	Stroke	Other CVD	Total CVD	CHD	Stroke	Other CVD	Total CVD
Belfast	35.3	4.5	50.9	90.7	65.0	8.3	93.7	167.0
Northern	12.4	2.1	19.5	34.1	22.9	3.9	35.9	62.7
Southern	11.7	2.0	17.4	31.1	21.5	3.8	32.0	57.2
South Eastern	13.4	1.7	20.6	35.7	24.7	3.1	37.9	65.7
Western	11.9	1.9	18.2	32.0	21.9	3.5	33.5	58.9
Northern Ireland	84.8	12.3	126.6	223.6	156.0	22.6	233.0	411.5

Notes:

A consultant episode refers to a complete period of care under one consultant. It may be finished through death, discharge or transfer to another hospital or consultant.

Cardiovascular Disease has been defined using any International Classification of Disease (ICD-10) code beginning with the letter 'I'. Codes were searched for in any of 16 diagnosis fields.

Coronary Heart Disease has been defined using ICD-10 codes I20 - I25, searched for in any of 16 diagnosis fields.

Stroke has been defined using ICD-10 codes I60 - I64, searched for in any of 16 diagnosis fields.

To calculate expenditure per head of population, the ONS revised mid-year population 2014 estimates were used.

Notes:

Expenditure data included within this workbook are taken from the 2011/12 programme budgeting returns. Programme budgeting returns represent a subset of overall NHS expenditure.

Programme budgeting in Scotland involves collating and presenting NHS expenditure on the basis of programmes of care rather than on the basis of inputs or accounting conventions.

The 2011/12 Scottish Health Service Costs Book was used as the primary data source, with much of the programme budgeting category distribution based on analysis conducted using nationally available datasets.

Scotland does not currently collect programme level cost information from NHS Boards. The principal cost data collection is the Scottish Health Service Costs Book which reports expenditure on the basis of specialty or service (e.g. Family Health Services (FHS)).

To calculate expenditure per head of population, the ONS revised mid-year population 2011 estimates were used.

4.7 Economic Costs of CVD

As well as human costs, cardiovascular disease (CVD), coronary heart disease (CHD) from non-health care related costs, such as productivity losses from death and illness in those of working age and from the informal care of people with the disease. and stroke have major economic consequences for the United Kingdom. These economic consequences come not just through the costs to treating those suffering from CVD but also from non-health care related costs, such as productivity losses from death and illness in those of working age and from the informal care of people with the disease.

According to cost estimates by members of the Health Economics Research Centre from the Nuffield Department of Population Health, University of Oxford and included in the European Cardiovascular Disease Statistics 2017 report published by the European Heart Network, Brussels, overall CVD was estimated to cost the UK economy €26 billion in 2015. Of the total cost of CVD in the UK, €12 billion (46%) came from direct health care costs.

Productivity losses due to mortality accounted for 23% of the total cost of CVD with productivity loss due to morbidity making up 10%. The informal care costs contributed around €5.5 billion, slightly less than mortality costs.

Of these €26 billion of CVD costs, €9 billion were due to CHD and €9.9 to stroke. Despite these higher total costs from CHD, health care costs were greater for stroke (€2.65 billion) than for CHD (€2.17 billion) whilst productivity losses due to mortality and morbidity were much higher for CHD.

Costs of cardiovascular disease, coronary heart disease and stroke, UK, 2015 (€thousands)

	Primary care	Outpatient care	A&E	Inpatient care	Medications	Total health care	per capita
CVD	1,638,492	1,073,695	398,661	6,505,414	2,732,144	12,348,406	190
CHD	149,694	299,002	102,413	1,236,089	379,036	2,166,234	33
Stroke	51,448	299,002	68,554	2,091,942	141,429	2,652,375	41
