# GLOSSARY

## Terms used in this compendium

**Age-standardised rate** - a measure of the rate that a population would experience if it had a standard age structure. It is useful to present rates as age-standardised, as it allows for comparisons between populations which may have very different age structures.

**Angioplasty** - a technique to widen a narrowed or obstructed blood vessel by inflating a small balloon that has been passed into the narrowed location via a catheter. This technique squashes the fatty plaque that has caused the narrowing, hence widening the artery.

**Atherosclerosis** - a build-up of fatty deposits inside the walls of the arteries - commonly referred to as a hardening or narrowing of the arteries.

**Atrial fibrillation (AF)** - one of the most common forms of abnormal heart rhythm (arrhythmia or dysrhythmia) - It starts in the upper chambers, causing the heart to beat irregularly and often too fast.

**Blood pressure** - a measure of the force that your heart uses to pump blood around your body. It is measured in millimetres of mercury (mmHg). High blood pressure is known as hypertension and low is hypotension.

**Body-mass index (BMI)** - a formula relating body weight to height to assess whether a person is overweight. Adult BMI is calculated by dividing a person's weight (in kilograms) by their height (in metres) squared, e.g. a man who is 1.8m tall and weighs 90kg has a BMI of 28 ( $90/(1.8 \times 1.8)$ ). Adults with a BMI between 25 and 30 are considered to be overweight. Those with a BMI of over 30 are considered obese. Children's BMI is calculated differently, taking age and gender, as well as height and weight, into account, and then compares the results with a model (reference) population.

**British National Formulary (BNF)** - a publication that provides key information on the selection, prescribing, dispensing and administration of all medicines that are generally prescribed in the UK.

**Cardiovascular disease (CVD)** - the collective term for all diseases affecting the heart and blood vessels - also referred to in previous compendia as heart and circulatory diseases.

**Cerebrovascular disease (CBVD)** - the collective term for all diseases affecting blood vessels that supply the brain. Technically, stroke (and the many sub-types of stroke) is a subset of cerebrovascular disease, but for statistical purposes the two terms are used interchangeably.

**Chronic kidney disease (CKD)** - a long-term condition where the kidneys do not work as well as they should. CKD can get worse over time and eventually the kidneys may stop working altogether, but this is uncommon. CKD increases the risk of developing cardiovascular diseases, including heart attack and stroke.

**Congenital heart disease** - a heart condition or defect that develops in the womb before a baby is born.

**Coronary artery bypass graft (CABG)** - an operation to bypass a narrowed section of a coronary artery and improve the blood supply to the heart muscle.

**Coronary heart disease (CHD)** - the collective term for diseases that occur when the walls of the coronary arteries become narrowed by a gradual build-up of fatty material called atheroma. The two main forms of CHD are heart attack (also known as myocardial infarction) and angina. Also known as ischaemic heart disease (IHD) and coronary artery disease (CAD).

**Deprivation** - the consequence of a lack of income and other resources, which cumulatively can be seen as living in poverty - see also IMD

**Diabetes** - a disease characterised by high blood glucose levels in blood. There are two main types: type 1 = caused by body being unable to make the hormone insulin; type 2 = when your body doesn't make enough insulin or can no longer use insulin properly. The resulting chronic high blood glucose levels (hyperglycaemia) are associated with long-term damage, dysfunction and failure of various organs, especially the eyes, kidneys, nerves, heart and blood vessels. Full scientific name is diabetes mellitus.

**Disability-adjusted life years (DALYs)** - the sum of years lost due to premature death (YLLs) and years lived with disability (YLDs). DALYs consider both premature death and health-related suffering (disability) to portray the total years of healthy life lost to a disease or condition. Features in the Global Burden of Disease (GBD), a detailed analysis of international health that models the burden of diseases and their risk factors.

**European Standard Population (ESP)** - an artificial population structure, which is used in the weighting of mortality or incidence data to produce age-standardised rates. The ESP was updated in 2013 to better reflect the age distribution of Europe.

**Finished consultant episode (FCE)** - a period of continuous patient care under the same consultant. These figures usually include day cases, i.e. an admission or overnight stay is not required.

**Heart and circulatory diseases** - collective term for all diseases affecting the heart and blood vessels - referred to here as cardiovascular disease (CVD) but the term has been used in previous compendia.

**Heart attack** - also referred to as myocardial infarction (MI) - a condition where the heart muscle is starved of oxygen, most commonly caused by a blockage of one or more of the coronary arteries. A heart attack usually causes severe pain in the centre of the chest. The pain usually feels like a heaviness or tightness which may also spread to the arms, neck, jaw, face, back or stomach. There may also be sweating, light-headedness, nausea and/or shortness of breath. Sometimes a heart attack can present with little or no discomfort.

**Heart failure** - a condition which is usually chronic. It occurs when the heart is unable to pump blood efficiently around the body because the heart is damaged or overworked. Some people have no symptoms, whereas others often suffer from shortness of breath, general tiredness and swelling of the feet and ankles - and the condition can be life-limiting.

**High blood pressure** - see hypertension.

**Hypertension** - a clinical condition of having a high blood pressure. Mostly it is considered blood pressures of 140/90 mmHg and greater to be high although this is influenced by other factors.

**Implantable cardioverter defibrillator (ICD)** - a small electrical device that can treat people with dangerously abnormal heart rhythms (ventricular arrhythmias).

**Incidence** - a measure of morbidity based on the number of new episodes of an illness arising in a population over a defined time period.

**Index of multiple deprivation (IMD)** - a relative measure of deprivation to classify geographic areas within each UK nation. IMD scores are based on a mix of component indicators (socioeconomic, health and environmental). These scores can then be compared with data from surveys or other analyses - typically split into five (quintiles) or ten (deciles) equal-size groupings from highest to lowest IMD score - to see if differences or inequalities exist.

**International Classification of Disease (ICD-10)** - tenth edition of a coding system published by the World Health Organization that provides an internationally recognised method of coding diseases in order to categorise mortality and morbidity statistics. Most cardiovascular diseases are coded in chapter nine/IX (I00-99) but some conditions (e.g. congenital heart disease, vascular dementia) are coded outside of this chapter. [please check notes on each table]

**Myocardial infarction (MI)** - see heart attack.

**Out-of-hospital cardiac arrest (OHCA)** - a critical medical emergency, where a person becomes unconscious, stops breathing and the heart stops pumping blood around the body. Unless treated immediately, it leads to death within minutes. Please note that statistics only include OHCA where a resuscitation attempt has been made by ambulance staff.

**Pacemaker** - a small electrical device used to treat some abnormal heart rhythms (arrhythmias) that can cause the heart to beat too slowly or miss beats.

**Percutaneous coronary intervention (PCI)** - a procedure that uses a catheter (a thin flexible tube) to place a stent to open coronary arteries in the heart that have been narrowed by atherosclerosis. Previously known as angioplasty with stent.

**Peripheral arterial disease (PAD)** - a condition in which a build-up of fatty deposits in the arteries restricts the blood supply to parts of the body, most commonly the legs. Also known as peripheral vascular disease (PVD).

**Prevalence** - a measure of morbidity based on the current level of a disease in the population at any particular time.

**Public access defibrillators (PADs)** - these are automated external defibrillators (AEDs) which are accessible in a location for public use, Following an OHCA [see above] a bystander can deploy a PAD to deliver a shock whilst waiting for an ambulance.

**Renal failure** - see chronic kidney disease.

**Return of spontaneous circulation (ROSC)** - an important intermediate outcome following OHCA [see above] with sustained, palpable pulse and effective blood circulation in a patient after cardiac arrest.

**Stroke** - the consequence of an interruption to the flow of blood to the brain. A stroke can vary in severity from a passing weakness or tingling of a limb to a profound paralysis, coma and/or death.

**Transient ischaemic attacks (TIA)** - a temporary disruption in the blood supply to part of the brain. Sometimes called a mini-stroke. The effects are usually fully resolved within 24 hours.

**Vascular dementia** - a type of dementia caused by a reduced blood supply to an area of the brain. The cells in the affected area of the brain don't get enough oxygen or nutrients and start to die. This leads to symptoms such as concentration problems and personality changes.

**Years of life lost (YLLs)** - the number of years of life that are lost due to premature mortality. Features in the Global Burden of Disease (GBD), a detailed analysis of international health that models the burden of diseases and their risk factors.

**Notes:** ICD-10 codes I00-I99, C38.0, F01, G45, P29, Q20-Q28 cardiovascular disease - CVD. Directly age-standardised using the 2013 European Standard Population. Historical data for the UK and across nations may vary from previous publications due to the rebasing of mid-year population estimates, changes to death classifications, and updating the European Standard Population weightings for earlier date. England rates are based on deaths and population data from Nomis and Office of National Statistics. Values may differ from those available in analyses from Office for Health Improvement and Disparities.

**Notes:** ICD-10 codes I20-I25 (ischaemic heart disease - coronary heart disease - CHD). Directly age-standardised using the 2013 European Standard Population.

Historical data for the UK and across nations may vary from previous publications due to the rebasing of mid-year population estimates, changes to death classifications, and updating the European Standard Population weightings for earlier date.

England rates are based on deaths and population data from Nomis and Office of National Statistics. Values may differ from those available in analyses from Office for Health Improvement and Disparities.

United Kingdom figures from 2013 onwards are greater than the sum of the figures for England, Wales, Scotland, and Northern Ireland as they include non-residents.

Historical data across the nations and the UK may vary from previous editions, as death classifications have changed over time. Data pre-2001 is provided in previous editions of the Compendium.

The total number of deaths in England have been taken from ONS Nomis Mortality Statistics. Values may differ from those available in analyses from Office for Health Improvement and Disparities.

United Kingdom figures from 2013 are greater than the sum of the figures for England, Wales, Scotland, and Northern Ireland as they include non-residents.

Historical data across the nations and the UK may vary from previous editions, as death classifications have changed over time. Data pre-2001 is provided in previous editions of the Compendium.

The total number of deaths in England have been taken from ONS Nomis Mortality Statistics. Values may differ from those available in analyses from Office for Health Improvement and Disparities.

 The figures presented here show the age-standardised mortality rates, and the volume of deaths, from heart disease and stroke in England.  
 This uses the definition of 'heart disease and stroke' associated with the government's stated ambition of reducing premature mortality from heart disease and stroke by 25% by 2035.  
 The total number of deaths in England have been taken from ONS Nomis Mortality Statistics. Values may differ from those available in analyses from Office for Health Improvement and Disparities.

**Notes:** ICD-10 codes I00-I99. Directly age-standardised using the 2013 European Standard Population. Some of the data for Wales have been suppressed - so values for each sex may not align with the total.

UK local authorities correct March 2026.

\* indicates number of deaths considered too small to calculate rate. City of London and Isles of Scilly excluded from ASDR analysis - sui generis status (small population)

\*\*Average IMD ranks calculated with different methodology, depending on nation. For England, we have used the rank of average lower super output area (LSOA) score, to align with the Office for Health Improvement and Disparities (OHID) Fingertips rankings

For Scotland, Wales, and Northern Ireland, we have used population-weighted average rank of all the small census areas in each local authority area, in line with previous editions of the Compendium.

**Notes:** ICD-10 codes I00-I99. Directly age-standardised using the 2013 European Standard Population. Some of the data for Wales have been suppressed - so values for each sex may not align with the total.

UK local authorities correct March 2026.

\* indicates number of deaths considered too small to calculate rate. City of London and Isles of Scilly excluded from ASDR analysis - sui generis status (small population)

\*\*Average IMD ranks calculated with different methodology, depending on nation. For England, we have used the rank of average lower super output area (LSOA) score, to align with the Office for Health Improvement and Disparities (OHID) Fingertips rankings

For Scotland, Wales, and Northern Ireland, we have used population-weighted average rank of all the small census areas in each local authority area, in line with previous editions of the Compendium.

Totals for male & female deaths may not equal total due to suppression of age-band cohorts in Nomis data - Wales only

**Notes:** ICD-10 codes I20-I25. Directly age-standardised using the 2013 European Standard Population. Some of the data for Wales have been suppressed - so values for each sex may not align with the total.

UK local authorities correct March 2026

\* indicates number of deaths considered too small to calculate rate. City of London and Isles of Scilly excluded from ASDR analysis - sui generis status (small population)

\*\*Average IMD ranks calculated with different methodology, depending on nation. For England, we have used the rank of average lower super output area (LSOA) score, to align with the Office for Health Improvement and Disparities (OHID) Fingertips rankings

For Scotland, Wales, and Northern Ireland, we have used population-weighted average rank of all the small census areas in each local authority area, in line with previous editions of the Compendium.

Totals for male & female deaths may not equal total due to suppression of age-band cohorts in Nomis data - England & Wales only

**Notes:** ICD-10 codes I20-I25. Directly age-standardised using the 2013 European Standard Population. Some of the data for Wales have been suppressed - so values for each sex may not align with the total. UK local authorities correct March 2026.

\* indicates number of deaths considered too small to calculate rate. City of London and Isles of Scilly excluded from ASDR analysis - sui generis status (small population)

\*\*Average IMD ranks calculated with different methodology, depending on nation. For England, we have used the rank of average lower super output area (LSOA) score, to align with the Office for Health Improvement and Disparities (OHID) Fingertips rankings. For Scotland, Wales, and Northern Ireland, we have used population-weighted average rank of all the small census areas in each local authority area, in line with previous editions of the Compendium.

Totals for male & female deaths may not equal total due to suppression of age-band cohorts in Nomis data - Wales only

**Notes:** ICD-10 codes I60-I69. Directly standardised using the 2013 European Standard Population.

UK local authorities correct March 2026.

\* indicates number of deaths considered too small to calculate rate. City of London and Isles of Scilly excluded from ASDR analysis - sui generis status (small population)

\*\*Average IMD ranks calculated with different methodology, depending on nation. For England, we have used the rank of average lower super output area (LSOA) score, to align with the Office for Health Improvement and Disparities (OHID) Fingertips rankings

For Scotland, Wales, and Northern Ireland, we have used population-weighted average rank of all the small census areas in each local authority area, in line with previous editions of the Compendium.

Totals for male & female deaths may not equal total due to suppression of age-band cohorts in Nomis data - Wales only

Average ASDRs for persons may be larger than those of men and women due to small values and suppressed data.

**Notes:**

YLLs refers to 'Years of Life Lost'. This is the estimated number of years of life that are lost due to premature mortality.

DALYs refers to 'Disability-Adjusted Life Years'. This is the sum of years lost due to premature death (YLLs) and years lived with disability (YLDs).

DALYs are also defined as years of healthy life lost.

All values are modelled estimates.

A/S = estimated age-standardised rates per 100,000 inhabitants.

**Notes:** Finished consultant episodes (FCE); admissions and day cases combined. Pregnancy cases excluded. Sex (gender) not recorded for some English FCEs (15k for all CVDs).

Differences between countries in the categorisation of episodes: in both England and Scotland, an FCE ends when the consultant changes.

However, in Scotland a change of sub-specialty results in a new FCE, whereas in England it does not, e.g. if a patient goes from a cardiac ward to an ITU and is still under the care of the same consultant, in England this would be counted as 1 FCE and in Scotland it would be counted as 2 FCE.

Wales data subject to revision \* figures not available, or suppressed (usually fewer than five patients)

**Notes:** Finished consultant episodes; ordinary admissions and day cases combined. Pregnancy cases not included. ICD-10 codes in parentheses.

For England, data for females up to and including 2011/12 is calculated as the difference between total finished consultant episodes and male consultant episodes.

\*\* Scotland - figures for 2012/13 to 2014/15 do not include subsequent myocardial infarction (I22) but revised coding advice had already led to only nominal use

Welsh data are subject to revision (latest and previous year).

These data show total numbers of people on GP patient registers in each area. GPs allocated to region and nation by main surgery postcode  
 With BHF analysis - adjustments have been made where active practices did not file patient data in the latest available year  
 CVD English region estimates by BHF based on latest prevalence data from NHS England; nation estimates from Global Burden of Disease (GBD)  
 - CVD estimate shows percentage of all-ages population (latest ONS/NRS/NISRA estimates) and not a proportion of the list size

region/nation totals see Table 2.13

These data show total numbers of people on GP patient registers in each area. GPs allocated to region and nation by main office postcode (BHF analysis)

With BHF analysis - adjustments have been made where active practices did not file patient data in the latest available year (previous data features instead)

BHF CVD estimates based on latest prevalence data; NHS England/PH Scotland/StatsWales/DH Northern Ireland and health surveys: NHS England and Welsh/Scottish Government; plus ONS population estimates

- CVD estimate shows percentage of population (latest ONS/NRS/NISRA estimates) and not a proportion of the list size

Population-weighted annual mean PM<sub>2.5</sub> concentration (ugm-3); UK calculation by BHF.

The anthropogenic component is used for health burden calculations as burden estimates based on total PM<sub>2.5</sub> might give a misleading impression of the scale of the potential influence of policy intervention.
